A Social Experiment of "No Private Placement, No ICO": The Birth of a "Golden Coin"

Some DeFi isn't about chasing the' faster wealth myth,' but rather tackling a more complex question:

In the absence of private equity, centralized operations, or the 'ICO narrative' of elite structures, can a community spontaneously organize, collectively uphold rules, and embed value into long-term verifiable mechanisms?

In the crypto world, the real challenge isn't creating a' fluctuating' project, but building a system that requires

no trust in individuals—only adherence to transparent rules.

AiFi was born from a social experiment incubated by the US-based AI DeFi Foundation: eliminating private placements and ICOs, shifting power from individuals to contracts, and entrusting growth to the community rather than individual operators.

It attempts to address the question through a more verifiable and long-term approach:

In the early days of decentralized finance (DeFi), when there was no centralized token allocation or hidden controllers, could a DeFi ecosystem sustain itself through transparent rules, node collaboration, and user participation to create lasting value?

Rather than resorting to complex financial engineering, it adopts a simpler yet more robust approach:

Leave the "short-term mood" to the market.

The "long-term order" is entrusted to the contract.

Hand over "build and expand" to the Node and Community Alliance.

1. Project Overview

1.1 Case Positioning

AiFi is a community-driven DeFi ecosystem that combines dividend distribution with ecosystem expansion.

NFT tokens provide verifiable entitlements including guaranteed redemption, USDT dividends, AiFi staking quotas, and airdrops.

The LP mechanism provides market liquidity and achieves 'equal rights distribution' with NFTs within the same dividend framework.

Implement public traceable destruction and constraints through zero-dead (0xDEAD) technology to minimize human interference.

1.2 Case Vision

AiFi is committed to becoming a truly decentralized DeFi project:

NFTs and LPs enjoy long-term dividend benefits.

NFTs have intrinsic value and can be resold or redeemed for assets at any time.

By adding LP, earn USDT dividends and new MEME Tokens to co-build ecosystem value growth.

2. Core Innovation

2.1 Pioneering the Dual-Mode Parallel System: NFT Equity LP Dividends + NFT Backstop Redemption

AiFi implements a parallel architecture with "single pool and equal dividend distribution":

NFT: With a 500 USDT/NFT redemption threshold, it provides guaranteed redemption and dividend benefits.

LP: After listing, you can join the USDT pool on PancakeSwap to share NFT pool rewards, with 2% withdrawal fees.

This design aims to provide predictable underlying constraints through NFTs and market liquidity with participation flexibility via LPs, working together to sustain the dividend pool.

2.2 Black Hole Destruction: Making Public Bases "Irreversible"

The project accepts LP donations from community leaders and transfers them to the 0xDEAD black hole for destruction, thereby enhancing public base attributes and reducing human-controlled spaces.

3. Community and Node System

3.1 Early-stage community alliance nodes (10)

AiFi has initially recruited 10 node community alliances, with leaders possessing early-stage experience in ecosystem applications, MEME, or DeFi projects, and having built projects with a market capitalization exceeding 50 million USDT.

3.2 Incentives and Contributions of Key Points

Leaders of the node community voluntarily contributed to the project development.

After the project goes live, 1,000,000 AiFi Tokens will be periodically released for node airdrop incentives (per the rules).

---

4. Tokenomics and Economic Models

4.1 Basic Parameters

Project Name: AiFi

Total: 21,000,000

Initial price: 0.005

Example of initial pool configuration: 80,000 USDT + 16,000,000 AiFi

4.2 Allocation Structure

Bottom pool: 16,000,000 (LPs enter the black hole)

Interactive Contract: 1,000,000 (Interactive Contract Waiver / Black Hole)

Subsequent ecosystem pool and market value: 1,000,000 (including market value maintenance, ecosystem meme pool LP, etc.)

Market support subsidies and incentives: 1,000,000 (including community rewards, marketing subsidies, event expenses, etc.)

Node drop reward: 1,000,000 (10 episodes; 10 days/episode)

Ecosystem Development: 1,000,000 (2% of the reward tokens for pool entry after AiFi's public launch, plus a 7-day automatic chain scan followed by airdrop)

---

5. NFT Certificate System (Minting, Bottom Support, Redemption, and Dividends)

5.1 NFT Basic Rules

500 USDT/NFT certificate

A total of 3,000 copies are issued with no additional printing allowed. The numbering process has been finalized and is publicly accessible.

The minting of NFTs and pre-monetization quota purchases are both executed by the DAPP.

5.2 NFT Core Equity

NFT holders enjoy:

500U Interactive Contract Automatic Redemption

AiFi's daily purchase limit before public launch

subsequent ecological token airdrop

Dividend: 20,000 USDT per day

platform premium listing or on-chain premium resale

5.3 Purchase Back and Destruction (The Key to the Bottom-line Guarantee Mechanism)

The NFT can be automatically redeemed via DAPP or through a transfer to an interactive contract, which will then automatically be transferred to the 0xDEAD black hole for destruction.

NFTs transferred to a black hole for destruction will not receive any benefits or dividends.

5.4 Rules for Reimbursement of Expenses

AiFi Public Launch and Redemption within 72 Hours: 10% Fee, Dividend Pool Entry

72-hour redemption after launch: 2% fee, funds to the contract dividend pool

6. Pre-launch quota purchase

6.1 Pre-launch quota purchase rhythm (fairness design)

AiFi NFTs are available for purchase via DAPP with daily limits before launch: (UTC+8)

Casting time 12:00

AiFi subscription time: 20:00

After 20:00 daily, purchases are subject to a quota system. To ensure fairness, individual purchase times are deferred by 24 hours.

7. LP system (dividends, airdrops, and restrictions)

7.1 Airdrop Incentives for LPs

After the public launch, LPs will be added, and 2% of the pool tokens will be airdropped as rewards after 7 days. The contract will execute automatically.

7.2 LP Transfer and Withdrawal Rules

Note: LP transfer addresses cannot be withdrawn and are ineligible for dividend distributions, mining rewards, or other benefits.

7.3 NFT Equity LP Dividend (Same Pool, Same Rights)

After the launch, users can add USDT to the PancakeSwap pool to participate in the 20,000 USDT/day dividend program alongside NFTs. Withdrawals are available at any time with a 2% withdrawal fee.

---

8. Tax and Fee Mechanism and Fund Flow (All Dividend Pool Reinvestment or Destruction)

8.1 Transfer Tax (Write-off)

Transfer 2% tax; and all items will be destroyed and sent to the black hole.

8.2 Purchase and Sale Tax (Dividend Pool for Capital Repatriation)

Buy: 2% of the dividend pool from the repatriation contract

Selling: 2% of the dividend pool from the repatriation contract

8.3 Withdrawal Pool Tax (Dividend Pool for Reflux)

Dividend pool for the 2% tax refund contract.

---

9. Dividend Mechanism (Time, Frequency, and Trigger)

9.1 Dividend Distribution Initiation and Frequency

Enable dividend distribution upon public launch:

Dividend: 20,000 USDT per day

12 hours per dose, twice daily

Dividends at 08:00 and 20:00 UTC+8

Dividends are distributed immediately after a single scan confirmation, and NFT transfers do not affect dividend distribution.

9.2 Dividend Participation Methods (Overview)

Transaction-triggered certificate dividends (NFT dividends)

USDT + Token Add to the pool to participate in dividends

---

10. Ecosystem Expansion: DAPP Mining (Eco-MEME) Launches 30 Days After T+

10.1 Opening Hours and Rewards

Launch DAPP mining (ecological meme, predicting the platform's native token) 30 days after the platform goes live.

LP mining meme prediction ecosystem platform token, released via DAPP

Referrers receive an additional 10% reward

10.2 Fundamental Rules of the Ecological MEME Prediction Platform

All eco-projects: no private placements, no ICOs, zero taxes, total amount 1 billion

All are mined and released by DAPP through LP:

20% pool

20% market value, DEX, etc.

5% community drop-off point

5% NFT airdrop

50% mining output

WBNB LP (WBNB Limited Partner) enters the dark pool to build a meme prediction platform ecosystem

NFTs benefit from meme token airdrops, boosting the ecosystem and value of LPs in the main contract.

---

11. The Principles of Safety and Transparency (Operational Requirements for the ICO-Free Project)

AiFi's core lies not in' promises, 'but in' structural constraints':

The node LP donation enters the black hole, reducing the withdrawable space.

The NFT is redeemed and destroyed upon entering the black hole, after which it loses all rights and benefits, with the rules being clear.

Tax revenues are either reinvested into dividend pools or directly allocated, with funds flowing through a single, traceable channel.

---

12. Risk Warning (Please Read Carefully)

Even though AiFi's design objective is' low-risk, long-term stable returns', the following risks must be acknowledged:

contract security risks (vulnerabilities, permission configurations, external dependency risks);

Liquidity risk (insufficient market depth and slippage caused by extreme market conditions);

Price volatility risk (token value is not guaranteed, dividend distribution may vary with ecosystem changes);

Misunderstanding of rules (e.g., 10% redemption fee within 72 hours after listing).

---

13. Roadmap

Phase 0 | Node Consensus and Public Base

The 10-node community alliance has formed a collaborative network and established consensus on development.

Phase 1 | NFT Minting and Pre-Release Quota Period

The DAPP will launch NFT minting (up to 3,000 NFTs) and introduce a daily quota-based purchasing system (12:00/20:00 UTC+8).

Phase 2 | Public Launch and Dividend Distribution Initiation

Enable same-pool, same-rights dividend: 20,000 USDT/day at 08:00 and 20:00 (UTC+8).

The trade tax and withdrawal pool tax are refunded to the dividend pool, while the transfer tax is written off.

Phase 3 | Ecological Expansion (T+30 days)

Enable DAPP mining (ecosystem meme), LPs can participate in mining, and referers receive an additional 10% reward.

Trust the code, grow the community

AiFi is a social experiment:

Replace centralized authority with open rules, replace verbal commitments with verifiable destruction and recycling, and replace private fundraising-driven models with node collaboration and user participation.

If you believe in long-termism, you'll find that:

The strongest moat is never a narrative, but a structure.

AiFi's vision goes beyond fleeting buzz—it's about establishing a verifiable, inheritable, and collaboratively maintained 'community financial ecosystem'.

When dividends are distributed on time as per the contract, when destruction is traceable, and when rights are recorded as on-chain certificates, participants no longer need to place their trust in any individual—instead, they can rely on publicly established rules and the collective efforts of the community.

If you believe in long-termism, you'll understand:

True DeFi is never about individuals, but about rules.
